**ATTENTION DESIGNERS AND MILLWORKERS:
READ THIS BEFORE DESIGNING OR BUILDING A ZOOM-ROOM CABINET
TO ENSURE SUCCESSFUL INSTALLATION OF THE BED MECHANISM.**

Please discuss with a Zoom-Room employee before changing any dimensions. You must follow the interior dimensions as shown in the Shop Drawings to accommodate the bed system.

The cabinet must be built so the interior dimension between the side support panels is 82- 1/4". FRONT ELEVATION page 1 of 6

Construct Bolsters in the shape of the rail guides on each side to establish the correct interior distance needed for the motors and bed mechanism to fit (79- 1/4"). Bolstering the rail guides gives the mattress ample space to travel in and out of the cabinetry so they do not damage the mattress cover as it travels up and down the rail guides (see Sheet 2 of 6 for positioning of the Bolsters). The Bolster's edge should be sanded and finished, and the lower bolsters should have the same finish as your cabinet, since once the bed is open they will be visible.

The Drop Block should be placed anterior to the top of the Bolsters and rail guides, just below the rail.

The middle recessed area of the cabinet (space for a TV or bookshelves) should begin at least 35" from the floor, and be no greater than 9" deep (not including the 3/4" front Headboard). This allows enough interior cavity space behind the TV Panel so that the mattress may travel without interference. (See sheet 2 of 6).

The Footboard should be a solid piece of plywood or MDF (23-1/2" H for solid floors, and 23" H for carpet), or a solid piece of plywood or MDF with light paneling attached to the front (for decoration). The Footboard requires attaching a Reinforcement Beam to eliminate warping, as the mattress applies pressure to the Foot- board. Weight limit is 52 lbs.

Any electrical wires or cables should be secured to the interior of the cabinet and covered to prevent snags on the mattress and mechanism. Wiring and cables should be channeled out through the side panels or through the Bolsters so as not to impede the travel of the bed and mechanism. Please see our document "Wiring for AV Equipment".

The IR receiver must be accessible for remote operation and power outage backup. As the chord is only 5' long, options may be limited. Generally the chord is either channeled through the back of a side column, to the side of the center cabinet or inside a side cabinet. If necessary, use an IR extender or consult with Zoom-Room regarding placement.

Always allow for an accessible interior by constructing a removable Headboard. This is especially important if you decide to mount your cabinet to the wall (normally the unit is freestanding and does not need to be bolted to the wall or floor).

The Strap Support Beam (see sheet 3 of 6) must be made of wood, not MDF.

If your Zoom-Room will be installed on carpet, additional casters may be applied (See Shop Drawings).

***Please send your Zoom-Room designs or drawings to petermedvin@zoom-room.com or fax them to (305) 677-9278 for review before constructing your cabinet.**

Call (888) 211-1120 with any questions.

CUT PARTS LIST:

1. LEFT SIDE PARTITION
2. RIGHT SIDE PARTITION
3. TOP PANEL
4. TV PANEL
5. TV SHELF
6. HEADBOARD
7. FOOTBOARD
8. FOOTBOARD REINFORCEMENT BEAM
9. BACK BASE PANEL
10. STRAP SUPPORT BEAM LEFT
11. STRAP SUPPORT BEAM RIGHT
12. DROP BLOCK LEFT
13. DROP BLOCK RIGHR
14. LEFT UPPER BOLSTER
15. RIGHT UPPER BOLSTER
16. LEFT LOWER BOLSTER
17. RIGHT LOVER BOLSTER
18. MIDDEL BOLSTER
19. CARRIAGE STABILIZERS (OPTIONAL FOR CARPET INSTALLATIONS)
